CREATE STRONG PASSWORDS AND USE PASSWORD MANAGER

- **Password Length** - Passwords must contain at least 12 characters. The longer the password, the less likely it is to be cracked by hackers.

- **Password Uniqueness** - Ensure security by using different passwords for each account. Using the same password for all of your accounts increases your risk of being compromised across multiple platforms.

- **Complexity** - Choosing a password that contains uppercase, lowercase, number and special characters will aide you in protecting your account from perpetrators with nefarious intent. Passwords are your first line of defense!

Password managers can help you ceate strong, unique passwords, and securely save them.
